

NEW LOWER PRICES FOR THE MTU-130 SERIES COMPUTERS

Micro Technology Unlimited has for years built its reputation on quality products and customer service through direct sales from the factory. Our initial plan for our new computer, the MTU-130, was to utilize dealers to make it easier for you to see our new computer. After reviewing your comments to us and your desire to buy directly from MTU we have substantially reduced our prices in order to better serve you through factory direct sales. We believe that you, our customer, will benefit most from this decision. This significant savings in money now makes it possible for many of you who have recognized MTU quality and performance to own a powerful MTU-130 computer system.

For those of you who want or need more compute power we offer the MTU DATAMOVER board. This board contains 256K bytes of RAM with a 68000 microprocessor on a second port running at 8 MHz. Thus, the 6502 system that you now know can move up to a 68000 system that you may need next year, or thereafter. When expanded, the 6502 becomes a front end I/O processor for the 68000 by handing all I/O to and from the DATAMOVER board.

Additionally, due to overwhelming customer requests for double sided drives and our desire to offer you the best system for your money, we have removed single sided disk systems from our product line. The MTU-130-1D and MTU-130-2D systems will use QUME DATATRACK 8 double sided drives. The speed of sustained access to data on our disks exceeds that of most other computer systems in our price range by a factor of greater than ten. This speed coupled with the other easy-to-use features, makes possible a new level of ease of use for you and your associates. This means more enjoyable and productive results using your MTU-130 computer.

We are please to present our new lower prices:

| SYSTEM NUMBER | DESCRIPTION | PRICE |
|----------------|--|--------|
| MTU-130-2D | Full system with two 1 Mbyte drives MTU-130 with all its standard features MTU-BASIC 1.0 with graphics and library extensions 12" green phosphor CRT module Two position 8" floppy disk module with 2 double sided double density drives All cables, etc. ready to plug in and run | \$3599 |
| MTU-130-1D | Full system with one 1 Mbyte drive | \$2999 |
| MTU-130 | Computer module with all standard disk operating system software and disk controller (no BASIC, CRT, or Disk drive/case — for those who want to add their own CRT and disk drives.) | \$1999 |
| MTU-100-CRT | Computer module with CRT only (no disk controller, BASIC or Disk drive/case — accepted as a ROMable programm- able terminal by many systems houses.) | \$1699 |
| MTU-100 | Computer module only (no disk controller, CRT, BASIC or Disk drive/case — for use with cassette or to expand from a KIM/SYM/AIM/PET with MTU disk up to a full function MTU-130 system.) | \$1549 |
| DATA MOVER-256 | 8 MHz 68000 board with 256 Kbyte RAM | \$ 999 |
